ErgoDentà

Ergo Endo **Black**

Endo Black is ErgoDenta's line of endodontic instruments made for precise root canal work. The matte black finish reduces light reflection, giving you a clearer view inside the tooth and helping you focus on small details that matter.

Designed with our ergonomic Danish approach, these instruments feel balanced and comfortable in the hand. They support steady finger control and good tactile feedback, which is especially important when working in narrow and delicate canals.

The Endo Black range covers the key steps of endodontic treatment — from examination and access to cleaning, shaping, and filling support. Each instrument is made from high-quality stainless steel and built to handle daily use and repeated sterilization.

Endo Black is about better visibility, better control, and smoother workflows during endodontic procedures.

Gutta-Percha **Remover**

Hook, Remove & Move On!

The ultra-thin 0.4 mm tip preserves canal walls. The double-ended design offers versatile hooks and easy retrieval from any angle, leaving no residue.

Using Rubber Dam Clamps Effectively

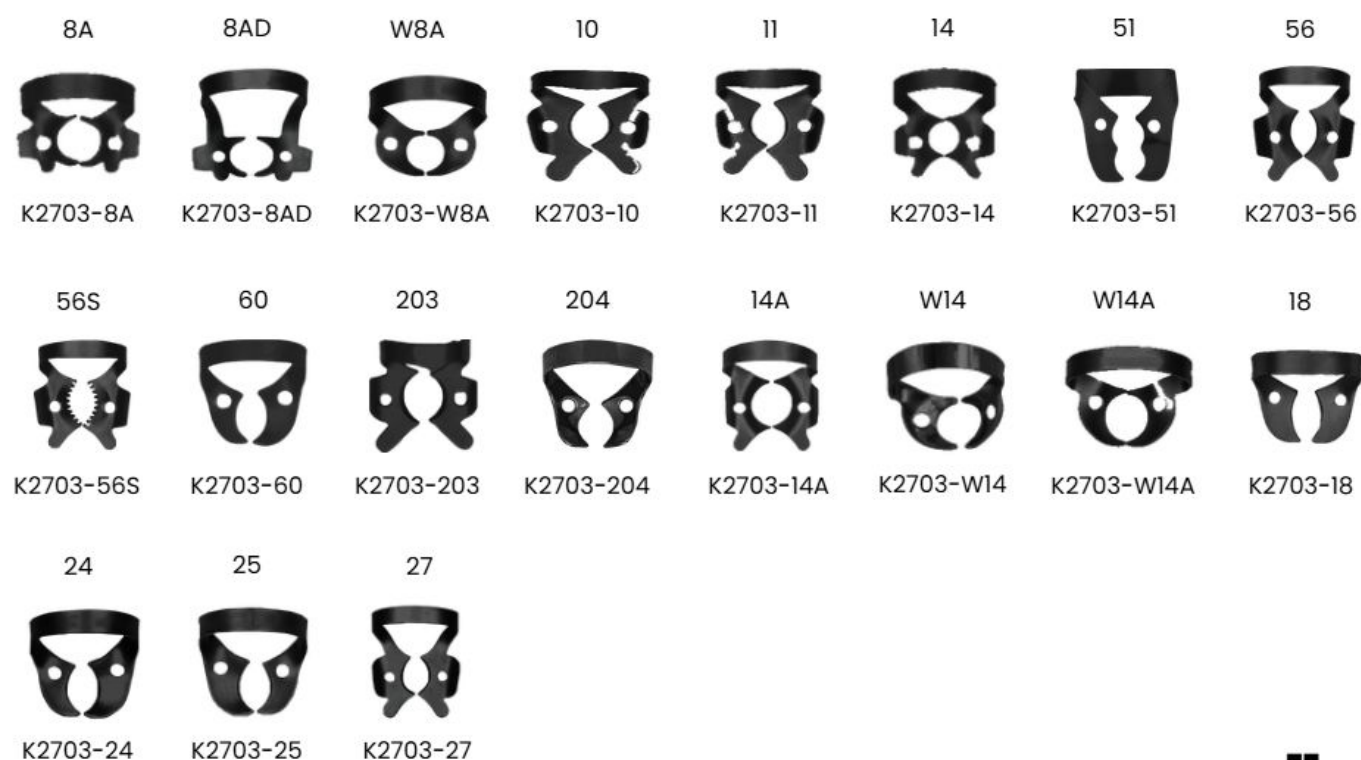

Successful rubber dam isolation depends on selecting and placing the correct clamp for each clinical situation. A properly fitted clamp provides stable tooth isolation, supports moisture control, and helps create a clear, dry working field.

Clamps should always be inspected before use and reprocessed according to standard sterilization protocols. Correct positioning below the tooth's height of contour ensures reliable retention throughout the procedure, while proper adaptation helps avoid unnecessary pressure on gingival tissues.

Choosing the right clamp design and size improves procedural efficiency, enhances visibility, and contributes to patient comfort during restorative and endodontic treatments.
